TECHNICAL DATA SHEET

DELTA®-DRAIN

Below Grade Foundation Drainage.

MATERIAL

A dimpled membrane made of special polypropylene (PP) and polypropylene non-woven TYPAR® geotextile. DELTA®-DRAIN polypropylene drainage core provides high compressive strength, impact resistance, and chemical and environmental stress crack resistance.

PROPERTIES

The product is comprised of a 2-layer geocomposite. The first layer is the polypropylene drainage core that drains incoming water freely to the footing perimeter drain, thus preventing the build-up of hydrostatic pressure against the waterproofing layer. It also acts as a highly effective protection layer for the waterproofing material during backfill operations. The second layer is a heatbonded PP geotextile. The rot-proof geotextile is highly water permeable and prevents clogging of the flow passages in the drainage core.

APPLICATION

DELTA®-DRAIN is unrolled against the foundation wall. It is typically used in conjunction with liquid or sheet applied waterproofing. Install the top edge of drain board at grade level. Place the bottom edge close to the perimeter footing drain. DELTA® Accessories are available for easy fastening and termination details.
